

Butyl Rubber Sealant for Structures Requiring Watertight Seal with Ease of Access

APPLICATIONS

CS-367 Entry Seal is a general purpose butyl rubber sealant for multiple applications that require a watertight seal but can be readily accessed. Not intended as a replacement for ConSeal CS-102 or other ConSeal performance rated sealants. **Not intended for use in expansion joints or joints that move.**

SEALING PROPERTIES

- Provides permanently pliable watertight joints.
- Remains pliable at all temperatures
- Non-oxidizing
- Provides long term or short term sealing solution
- Provides an air or leak resistant seal

PHYSICAL PROPERTIES & CHEMICAL COMPOSITION

Description	Spec	CS-367
Color		Earthtone
Specific Gravity, 77°F (25°C)	ASTM D71	1.65-1.75
Hardness (150 gram cone penetration)	ASTM D217	50-60 dmm
Flash Point, C.O.C., °F	ASTM D92	350°F
Application temperature		0° to 100°F
Aging properties		Non-shrinking
Shelf life		2 years minimum

IMMERSION TESTING

30-Day Immersion Testing: No visible deterioration when tested in 5% Caustic Potash, 5% Hydrochloric Acid, 5% Sulfuric Acid, and 5% saturated Hydrogen Sulfide.

One Year Immersion Testing: No visible deterioration when tested in 5% Formaldehyde, 5% Formic Acid, 5% Sulfuric Acid, 5% Hydrochloric Acid, 5% Sodium Hydroxide, 5% Hydrogen Sulfide, and 5% Potassium Hydroxide.

INSTALLATION GUIDELINES

The following procedures should be followed for optimum sealant performance.

- Clean the upper and lower joint surface with a stiff bristle brush.
- Remove any dirt, debris, flashing, or concrete high points, which could keep the joint from coming together.
- ConSeal recommends the use of surface primers, as primers improve adhesion. When using a primer, allow the primer to dry before placing sealant.
- ConSeal primers are specifically designed for use with ConSeal products. Contact ConSeal for the best primer for the projects specific application.
- **DO NOT PLACE ANY JOINTS WITHIN 12" OF A CORNER.**
- Join the sealant into one continuous strand by kneading the ends together where they meet. **Do not stretch the sealant.**
- A minimum compression of 50% is required. Greater than 50% compression is optimal. It may take 15-20 minutes for the sealant to fully compress depending on the ambient temperature and the weight being applied.
